

Amendments to the Specification

Please add the following new paragraph after last paragraph on page 20.

The invention includes the following, as for example is disclosed above and in the drawings:

A flowable edible material mass progressive dispenser comprising:

a) a spreader having a longitudinally forwardly elongated container for said mass, said container having an end wall,

b) a nozzle projecting generally forwardly from said end wall, and having a side wall that extends forwardly and terminates at a furthest forward end opening through which said mass is dispensed,

c) said end opening defining a periphery having a lateral width dimension, and a height dimension that remains substantially the same throughout the lateral width extent of said end opening, said lateral width dimension substantially exceeding twice said height dimension of said end opening, for spreading the mass of material being dispensed, the spreader having a surface acting to spread said material being dispensed via the nozzle end opening,

d) said nozzle side wall having an outer surface

that is everywhere forwardly convergent toward said end opening periphery to define forward taper as it peripherally and forwardly approaches said nozzle end opening,

e) whereby a substantially constant height layer of said mass is dispensed forwardly through said nozzle end opening as the mass in the container is pressurized, and said layer has the width of said end opening,

f) said forward taper acting to terminally narrow the nozzle and configure it for ease of spreading said dispensed layer.
